

WTS | WEB TRACKING SYSTEM

BY NEOPOST

A proven process for package receiving, chain of custody and proof of delivery.

Package receiving, chain of custody and proof of delivery

Ensure important packages are received and delivered correctly with a proven process managed by WTS Lite. Use our data entry forms to enter information important to you. Capture an electronic signature for proof of delivery using a signature pad or mobile device.

Provide better service for your staff and employees

WTS Lite can send an email or text message to staff when a package is received or at any stage of the delivery process. For example, WTS Lite can send an email on receipt of a package on first delivery attempt and when delivered. You can customize up to three statuses to match your workflow. Each status can alert staff and employees about their package's location.

Fast shipment research when the pressure is on

Whether you need to know about the disposition of an urgent package or you are looking for historical data about packages received days, months or even years ago, WTS Lite delivers. Finding historical package data is super fast. Data is searchable up to seven years.

Easy to implement

Be up and running within minutes of your account being set up and equipment received. WTS Lite is intuitive and easy to use. WTS Lite is on our powerful and secure cloud so there's no software to install.

As rugged as you like with industry-standard peripherals

Attach a scanner to your computer for quick scanning of carrier packages. Need additional information on a package before delivery? No problem - attach a label printer and create customer receipt labels. Add rugged mobile computers to mobilize receipt and delivery.
